

AnalogModuleV1_0::reset

BusModuleV1_0::reset

CANTramModule::reset

```
graph LR; A[AnalogModuleV1_0::reset] --> C[CANTramModule::reset]; B[BusModuleV1_0::reset] --> C;
```

The diagram illustrates a reset dependency. Two white rectangular boxes on the left, labeled 'AnalogModuleV1_0::reset' and 'BusModuleV1_0::reset', have blue arrows pointing to a single gray rectangular box on the right labeled 'CANTramModule::reset'. This indicates that the CANTramModule's reset is triggered by the reset of either the AnalogModuleV1_0 or the BusModuleV1_0.
